BARRIERS IN ENHANCEMENT OF LOGISTICS IN THE REPUBLIC OF UZBEKISTAN

Tulaganova Shirin,**Sophomore student of SOL at Inha University in Tashkent,****E-mail address: shirintulaganova1@gmail.com**

Annotatsiya: Logistika imkoniyatlarsiz yaxshi tashkil etilgan tashqi savdoni boshqaradigan biron mamlakatni tasavvur qilish qiyin. Tajribali tadbirkor yoki biznes sohasidagi boshlang'ich ish yurituvchi imkon qadar arzon narxlardagi xizmatlar bilan taklif qilishlari kerak. Logistika, birinchi navbatda, mijozlarni qondirishni anglatadi. Xaridorlarga o'zlarining buyurtma statusi to'g'risida kuniga 24 soat ma'lumot berilishi kerak. O'zbekiston ikki marta yopiq davlat hisoblanadi, ya'ni ikki mamlakat qo'shni mamlakatlar hududi orqali okeanga kirish imkoniga ega bo'lgan ikki mamlakatning biri. O'zbekistonning jozibador geostrategik pozitsiyasining eng muhim omili transport kommunikatsiyalari rivojlangan tizimining mavjudligi bo'lib, ular ichki transport ehtiyojlarini deyarli qondiradi. Respublika Markaziy Osiyoda temir yo'llar va avtomobil yo'llari tarmog'ining eng yuqori zichligiga ega. Shunga qaramay, logistika xizmatlari nisbatan qiyin va qimmat, chunki O'zbekiston dengizga chiqa olmaydi va jahon bozorlarining ustunligidan uzoqda.

Kalit so'zlar: logistika, aqsh xalqaro taraqqiyot agentligi, germaniya xalqaro hamkorlik jamiyati, xalqaro yo'l transporti.

Аннотация: Трудно представить какую-либо страну, в которой хорошо организована внешняя торговля без логистических возможностей. Будучи либо опытным предпринимателем, либо начинающим владельцем в сфере бизнеса, они оба должны предоставлять качественные услуги по как можно более низкой цене. Ведь логистика - это, прежде всего, удовлетворенность клиентов. Клиенты должны быть проинформированы 24/7 в день о состоянии их заказа. Узбекистан дважды закрыт, то есть одна из двух стран в мире,

которые имеют выход к океану через территорию двух соседних стран. Важнейшим фактором привлекательной геостратегической позиции Узбекистана является наличие развитой системы транспортных коммуникаций, которая практически удовлетворяет внутренние транспортные потребности. Республика имеет самую высокую плотность сетей железных и автомобильных дорог в Центральной Азии. Тем не менее, логистические услуги являются относительно сложными и дорогостоящими, поскольку Узбекистан не имеет выхода к морю и далек от доминирующих мировых рынков.

Ключевые слова: логистика, агентство США по международному развитию, немецкое общество международного сотрудничества, международный наземный транспорт.

Abstract: It's hard to imagine any country which operates well organized foreign trade without logistics opportunities. Either an experienced entrepreneur or a start-up owner in business field, they both have to provide quality services at as a low cost as possible. Because Logistics means, first of all, customer satisfaction. Clients should be informed 24/7 a day about the status of their order. Uzbekistan is twice closed, that is, one of the two countries in the world that have access to the ocean through the territory of two neighboring countries. The most important factor of the attractive geostrategic position of Uzbekistan is the availability of a developed system of transport communications, which practically satisfies the internal transportation needs. The Republic has the highest density of networks of railways and highways in Central Asia. Nevertheless, logistics services are relatively hard and expensive since Uzbekistan has no access to the sea and is far removed from the dominating global markets.

Keywords: Logistics, US Agency for International Development(USAID), German Society for International Cooperation(GIZ), International Road Transport(IRT).

Introduction

There are obstacles towards integration of logistics systems in Uzbekistan. Below we will view some of them. Any independent country has its own legislative system related to industry, business, economy and other aspects in order to protect people working in these areas. This issue was discussed at a regional forum in Almaty organized by the US Agency for International Development(USAID) and the German Society for International Cooperation(GIZ) in 2017. In general, the Central Asian countries, including Uzbekistan, have developed a solid legislative framework in the field of land transport. A number of by-laws and various state development programs regulating international road transport(IRT) of goods have been adopted. However, all countries are characterized by inadequate legislative regulation, lack of clear requirements for a mechanism for managing cargo flows. For instance, as was mentioned in the forum, in the sphere of regulation, the countries of Central Asia carry out rail transportation on the basis of the Agreement on International Goods Rail Transport.

Research and methodology

However, there are a number of weak points:

- the end-to-end transport bill is rarely used and door-to-door service is not sufficiently developed;

- the rules of maintenance and registration are not harmonized, because of which large downtime is observed.

In 12 December, 2017 The Chamber of Commerce and Industry of Uzbekistan held a meeting of the Expert Council on Transport and Logistics. Participants discussed the development of road transport in Uzbekistan. At the meeting, problems and barriers that adversely affected the development of this sphere were voiced:

- the sphere of cargo transportation by motor transport are not transparent in tax and insurance terms

- the current state of the monetary, tax and customs-excise policy does not allow for an active modernization of the rolling stock of national and international

carriers.

Transportation, as one of the main parts of Logistics, plays an enormous role in enhancing growth rate of domestic economy. The share of rail transport in Uzbekistan accounts for more than 65% of the volume of freight turnover of all types of transport. In road transport, the share of freight turnover is 33.7% of all modes of transport. The existing network of railway and automobile transport communications not only reliably connects the most remote regions of the republic, provides access to international transport systems, but also provides broad access to the main sources of natural and mineral resources of the country.

The Chamber of Commerce and Industry of Uzbekistan also pointed out some issues connected to transportation of the country:

- the pace of renewal of the rolling stock seriously lags behind the dynamics of economic growth;
- one third of the truck fleet consists of morally and physically obsolete vehicles with high production costs and specific consumption for fuel and lubricants;
- The speed of traffic along the roads of Uzbekistan is 2 times less than in the EU.

Moreover, not only law and transportation obstacles existed. The lack of modern means of technical control - scanners for checking cars in laden condition, and not all border crossing points are equipped with weighing scales for trucks. In addition, strategies for the development of logistics centers, terminals for storage of transport infrastructure are not enough, in part a shortage of specialists in the design and creation of logistics centers, implementation and development managers to provide a wide range of transport and logistics services. Next, there is no information portal on the provision of reliable and timely data on logistics services, free storage space, storage conditions, tariffs and the cost of storage and handling services, that is, all the information that makes trade transparent and predictable. In 2015 Association for the Development of Business Logistics made a research of

state of logistics in Uzbekistan. According to the results of the survey, only 18% out of the total number of transport companies are available to provide additional services except for the carriage itself. Problems in the logistics field serve as barrier to the fast development of others such as e-commerce, trade with developed countries of Europe/USA, and obviously the economic state of the country.

Analysis and results

For solving all the problems given above, a number of laws and measures are taken to improve transport and logistics services. The tasks of developing transport communications, increasing the volume of transportation and competitiveness depend on the implementation of a whole range of measures - from technical equipment to the training of qualified personnel, from the improvement of technology to the introduction of information and logistics systems of work organization. Recent years, the republic has paid much attention to the improvement of transport infrastructure, including the creation of large logistics centers for the organization of a rational process of transporting goods and services from producers to consumers, not only between the regions of the republic, but also on an international scale. Logistic centers in Angren and Navoi can be examples of this. The Republic of Uzbekistan plans to build 17 logistics centers specializing in processing, storage and transportation of fruit and vegetable products by the year of 2020. And construction of one of them has already began. The center, organized by Greenfoodtrade LLC in the Yukorichirchik district of the Tashkent region, is engaged in storing, processing and exporting agricultural products. In a complex of more than 40 hectares, five cross-docking; a hypermarket; a warehouse for sorting and storing agricultural products; a refrigerator with a capacity of 10,000 tons and a hotel for 150 people will be built. The project will be launched at full capacity in the third quarter of 2018.

Uzbekistan ranked 99 out of 160 countries in the Logistics Performance Index. This is evidenced by the report of the World Bank in the year of 2018. **LPI (Logistics Performance Index)** estimates the following six factors (in brackets
